

## Properties of Materials

You used different materials to make your Play-Doh teddy bears. Scientists like to observe what properties materials have. For example, wood is a material used to make pencils. Wood is usually hard. Play-Doh is soft and bendable.

Use your senses to observe the materials. Then describe their properties. You can use these words to describe the materials. Add your own too!

### Word Bank

soft      hard      bendable      not bendable

bright-colored      dull-colored

shiny      strong smell      smooth      rough
